

What's Happening Now - May 2013

The next Business Objects (BO) upgrade process was recently kicked off with a series of town hall meetings on each campus, as well as a presentation at the UIC IT Professionals Forum. This upgrade to BOXI 4.1 will shift to Web Intelligence Rich Client (Webi) as the primary reporting tool and Desktop Intelligence (Deski) reports will no longer be available. Webi and Deski are both report editors and contain similar features.

This project is a two-year project, which includes several different phases. The current phase, Deski User Conversion, is user specific and focuses on converting Desktop Intelligence (Deski) reports to Web Intelligence Rich Client (Webi) reports.

For more information on this project including the project timeline and resources to contact for assistance, please visit the [Business Objects upgrade website](#).

See the [feature archive](#) for previous monthly updates.
